## $\Delta S = \Delta Q$ IN $K^0$ DECAYS

The relative amount of $\Delta S \neq \Delta Q$ component present is measured by the parameter $x$, defined as

$$x = A(\overline{K}^0 \to \pi^- \ell^+ \nu)/A(K^0 \to \pi^- \ell^+ \nu) \ .$$

We list Re$\{x\}$ and Im$\{x\}$ for $K_{e3}$ and $K_{\mu 3}$ combined.
