$$A_{FB}^{th} \text{ in } \Lambda_b \rightarrow \Lambda\mu^+\mu^- = 0.25 \pm 0.04$$

The branching fractions $B(b\text{-baryon} \rightarrow \Lambda \ell^- \bar{\nu}_\ell \text{anything})$ and $B(\Lambda_b^0 \rightarrow \Lambda_c^+ \ell^- \bar{\nu}_\ell \text{anything})$ are not pure measurements because the underlying measured products of these with $B(b \rightarrow b\text{-baryon})$ were used to determine $B(b \rightarrow b\text{-baryon})$, as described in the note "Production and Decay of b -Flavored Hadrons."

For inclusive branching fractions, e.g., $\Lambda_b \rightarrow \bar{\Lambda}_c \text{anything}$, the values usually are multiplicities, not branching fractions. They can be greater than one.

 b -baryon ADMIXTURE ($\Lambda_b, \Xi_b, \Omega_b$)

These branching fractions are actually an average over weakly decaying b -baryons weighted by their production rates at the LHC, LEP, and Tevatron, branching ratios, and detection efficiencies. They scale with the b -baryon production fraction $B(b \rightarrow b\text{-baryon})$.

The branching fractions $B(b\text{-baryon} \rightarrow \Lambda \ell^- \bar{\nu}_\ell \text{ anything})$ and $B(\Lambda_b^0 \rightarrow \Lambda_c^+ \ell^- \bar{\nu}_\ell \text{ anything})$ are not pure measurements because the underlying measured products of these with $B(b \rightarrow b\text{-baryon})$ were used to determine $B(b \rightarrow b\text{-baryon})$, as described in the note "Production and Decay of b -Flavored Hadrons."

For inclusive branching fractions, e.g., $B \rightarrow D^\pm$ anything, the values usually are multiplicities, not branching fractions. They can be greater than one.

<i>b</i>-baryon ADMIXTURE DECAY MODES ($\Lambda_b, \Xi_b, \Omega_b$)	Fraction (Γ_i/Γ)	Scale factor	ρ (MeV/c)
$p\mu^-\bar{\nu}$ anything	(5.8 ^{+2.3} _{-2.0}) %		—
$p\ell\bar{\nu}_\ell$ anything	(5.6 ± 1.2) %		—
p anything	(70 ± 22) %		—
$\Lambda\ell^-\bar{\nu}_\ell$ anything	(3.8 ± 0.6) %		—
$\Lambda\ell^+\nu_\ell$ anything	(3.2 ± 0.8) %		—
Λ anything	(39 ± 7) %		—
$\Xi^-\ell^-\bar{\nu}_\ell$ anything	(4.6 ± 1.4) × 10 ⁻³	1.2	—

NOTES

[a] P_c^+ is a pentaquark-charmonium state.

[b] Not a pure measurement. See note at head of Λ_b^0 Decay Modes.

[c] Here h^- means π^- or K^- .
